Attn B R Lewis

TRANSMITTAL OF PHASE II GEOLOGIC CHARACTERIZATION DATA ACQUISITION, APPENDIX F. OF THE INDIANA STREET WORKPLAN - JEE-127-92

Enclosed for your review please find three copies of the Work Plan "Phase II Geologic Characterization Data Acquisition, Appendix F - Shallow High Resolution Seismic Reflection Surveying, Geologic Characterization of the Rocky Flats Plant, Indiana Street " The seismic survey described in this Work Plan will fill in the gaps in the seismic data previously acquired along Indiana Street This technique has been successful in identifying subsurface channels and ground water migration pathways. Upon completion of this survey we will have continuous data along the eastern plant boundary from Highway 128, through the east entrance of the Rocky Flats Plant

We are requesting an expedient review of this plan by your staff so this work may begin as soon as possible. If you require additional information, please contact M. S. Buddy of Remediation Programs at extension 7005
